

# DIGIEN ION

## Management of enterprises

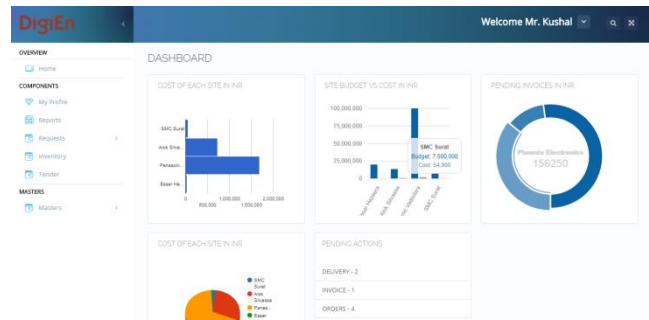

is the most critical need now. Organizations not gone digital or not upgraded themselves to the latest technology will face a lot of challenges in future. Resource Planning not just helps maintaining organizational data but also guides in taking decisions for future. This Enterprise Management has gone digital now. Tools are better than before. Analytics is becoming essence of these products now. Collecting data is just one minor part now. Main tool is analytics now.

## DIGIEN INFO SOFT

DigiEn InfoSoft LLP has taken up task of digitizing organizations. Products and solutions provided by DigiEn help organizations to automate processes digitally and ultimately improved and efficient productivity. Enterprise management services provided by DigiEn work on concept of digital system. Digital Resource Planning, a one umbrella concept from DigiEn, i.e. DigiEn iON (Digital Enterprises intelligent Organization Neural) provides different modules to manage, analyse and represent data.

## DIGIEN ION

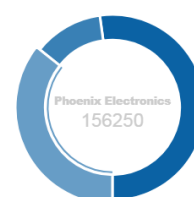

DigiEn iON is complete customized One Umbrella suit provided by DigiEn. It is developed to suit customers' requirements. DigiEn believes no two customers have same set of requirements. Even processes of organizations change from one to another. Only customized solutions can suit requirements of organizations like these.

DigiEn iON functions to manage entire data of the organization starting from employees, payroll, stocks, inventory, clients, accounts, billing, etc. DigiEn iON provides sophisticated user experience to manage user data. All data entry modules have class user screens. It is built on top of latest technology available in market. And systems are upgraded time to time. DigiEn iON has robust architecture beneath. System is scalable to suit any type of organization. DigiEn iON is truly multiplatform. It can be hosted on a desktop, a server, even on cloud. It is also provided as SaaS.

DigiEn iON provides different analytical statistics in different forms like charts, reports etc. DigiEn engine is capable of analysing gathered data and help users in making decisions for future. The DigiEn AI engine will collaborate with this analytics and make future processes of organization better, leading the entire system into IEM (Intelligent Enterprise Management) from just being an ERP.
